

# NEMA 4-12 ENCLOSURES

# 9412

## Oil, dust & water tight free standing enclosures

The 9412 water, oil & dust tight enclosures are used indoors or outdoors in areas where the enclosures may be subject to hosing or to water coming from any direction or for protection against dust, dirt or oil splashing. The 9412 are made from quality code gauge steel, with corner seams continuously welded. The opening has a curled lip around all sides to prevent dripping water from entering the enclosure when

the door is open, it also increases rigidity. A high quality robotically poured-in-place seamless gasket ensures a complete and durable water tight seal. The pins of the concealed hinges can be pulled out to remove the door. Quarter turn locking mechanisms on three sides of the door ensure positive closing. Optional back panels can be mounted at any depth, using the three sets of rails welded on the sides of the cabi-

net. Side panels can also be ordered separately. A print pocket is provided. Enclosures and panels are finished with heat fused polyester powder, electrostatically applied on a pretreated base. Box is ANSI/ASA 61 gray, panel is white (other colors available).

**CSA Certified / UL Listed
